

Anish George

Platform Engineering | Developer Experience

Ottawa, Ontario, Canada

LinkedIn: anishgeorge97 | GitHub: ANISHG-26 | Portfolio: anishg-26.github.io

Profile

Platform engineer focused on the runtime foundations, delivery paths, and developer workflows that help teams build with confidence. Experience spans reusable CI/CD, containerized test infrastructure, Kubernetes delivery, secure release workflows, and observability. Works with application teams to understand friction and turn recurring tasks into understandable, repeatable engineering practices.

Technical Capabilities

Platform: Kubernetes, Azure Kubernetes Service, Docker, Helm, OpenShift application delivery.

Delivery & Automation: GitHub Actions, Azure DevOps, Jenkins, GitLab, JFrog Artifactory, Python, Shell, Groovy, Git.

Observability & Validation: OpenTelemetry, Prometheus, Grafana, Loki, Tempo, Locust.

Secure Delivery: SAST, SCA, container and DAST integration; Azure Key Vault with Secrets Store CSI Driver.

Professional Experience

Ernst & Young LLP — Ottawa, Ontario

Senior Technology Consultant

Aug 2026 – Present

Staff Technology Consultant

Oct 2024 – Jul 2026

Enterprise GenAI Product | Platform Delivery | Oct 2025 – Jul 2026

- Translated an evolving multi-component application design into working Kubernetes development and QA environments, using manifests, Azure delivery integrations, persistent storage, autoscaling, disruption budgets, and health probes.
- Built adopted pipelines to version and publish Python SDK wheels and shared UI packages to JFrog for reuse across product components.
- Collaborated with application engineers on shared-storage tool-installation and Module Federation delivery proofs of concept. Dynamic lifecycle automation and dependency isolation remained incomplete.
- Deployed Prometheus, Loki, Tempo, and Grafana in internal environments to centralize logs, metrics, traces, and scaling visibility for developer troubleshooting.
- Built an initial k6 proof of concept and integrated developer-authored Locust tests into CI/CD; proposed weighted usage scenarios implemented by another engineer.
- Migrated repositories from Azure DevOps to GitHub using centrally managed tooling and removed more than 200 stale branches with CSV-driven automation.

Scope: internal development, QA, demo, and consultant-use environments; no customer-production, formal on-call, or SLO ownership.

Professional Experience, Continued

Ernst & Young LLP

Internal Cybersecurity Product | Infrastructure & Delivery | Oct 2024 – Dec 2025

- Owned infrastructure and DevOps implementation within the product team, moving a VM-hosted application to a containerized Azure Kubernetes Service deployment with Helm-based deployment patterns.
- Built Azure DevOps delivery pipelines, branching and promotion practices, and integrated security and quality controls into the release workflow.
- Led QA enablement and release into the organization's internal production environment through required enterprise processes and controls.

Morgan Stanley — Montreal, Quebec

Technology Analyst Intern

May 2023 – Apr 2024

- Modernized legacy system-test execution with Docker, Python, and shell scripting within the wider platform team.
- Traced direct and transitive dependencies and built CLI tooling for repeatable image construction, test execution, and result inspection. A future parallel runner remained exploratory.

Accenture Solutions Pvt Ltd — Bengaluru, India

Application Development Analyst

Dec 2021 – Aug 2022

Application Development Associate

Nov 2020 – Nov 2021

- Implemented CI/CD and OpenShift application delivery within an architect-led enterprise DevOps platform, connecting Jenkins, GitLab, SonarQube, and Nexus.
- Built reusable Groovy Shared Library logic and Job DSL automation for repository and Jenkins-job onboarding.
- Developed Python automation to compare image versions across OpenShift environments and exposed the workflow through Jenkins for application teams.

Selected Projects

Cross-Cloud MLOps Pipeline | Academic three-person team | 2023

Implemented provider-specific training and deployment artifacts across AWS SageMaker, Azure Machine Learning, and GCP Vertex AI; tested hosted endpoints through a shared notebook. Academic prototype, not production MLOps ownership.

Moving Services Application | Student client engagement | 2023

Led the cloud and DevOps workstream within a student team, evaluated Azure hosting, and established GitHub Actions delivery for a React and Spring Boot solution.

Education

Master of Engineering, Electrical and Computer Engineering

University of Ottawa | Sep 2022 – May 2024

Bachelor of Engineering, Electronics and Communication Engineering

JSS Academy of Technical Education, Visvesvaraya Technological University

Aug 2016 – Aug 2020
