Professional Summary

Platform engineer and technology consultant who turns ambiguous product needs into dependable delivery paths and developer-enablement systems. Experience spans Kubernetes and OpenShift delivery, reusable CI/CD, test reproducibility, secure release workflows, observability, and performance validation across enterprise product and client environments. Brings empathetic requirements discovery, systems thinking, and clear technical communication to help application and platform teams understand trade-offs and move from intent to working delivery.

TECHNICAL CAPABILITIES

- **Platform Delivery:** Kubernetes, Azure Kubernetes Service, OpenShift, Docker, Helm
- **Delivery & Automation:** GitHub Actions, Azure DevOps, Jenkins, GitLab, JFrog Artifactory, Python, Shell, Groovy, Git
- **Observability & Validation:** OpenTelemetry, Prometheus, Loki, Tempo, Grafana, Locust, k6
- **Secure Delivery:** Azure Key Vault, Secrets Store CSI Driver, SonarQube, Mend, AquaSec, Checkmarx One, Qualys WAS
- **Consulting & Delivery:** Requirements discovery, stakeholder empathy, systems thinking, solution visualization, technical communication, cross-functional delivery

PROFESSIONAL EXPERIENCE

Senior Technology Consultant	Aug 2026 – Present
Staff Technology Consultant	Oct 2024 – Jul 2026
<i>Ernst & Young LLP, Ottawa, Ontario</i>	
FlexiGenAI — Kubernetes Platform & Delivery Engineering	Oct 2025 – Jul 2026
Served as the core infrastructure and platform engineer for a multi-component enterprise GenAI product, translating architectural intent and developer-built components into working Kubernetes delivery while making dependencies and system trade-offs visible as priorities evolved.	
• Established GitHub Actions delivery workflows and deployed a materially changed architecture on Kubernetes, implementing Deployments, Services, ConfigMaps, ingress, persistent storage, autoscaling, disruption budgets, health probes, and environment-specific configuration. • Integrated delivery with Azure Kubernetes Service, Container Registry, Application Gateway, Front Door/CDN, Blob Storage, Key Vault, networking, DNS, and certificates while coordinating deeper IAM and security configuration with another engineer. • Recovered a multi-component deployment through incremental service rollout, log inspection, and dependency verification, restoring a working delivery path across internal development, QA, demo, and consultant-use environments. • Built adopted pipelines that versioned and published Python SDK wheels and shared UI packages to JFrog for reuse across backend, tools-engine, and frontend components. • Deployed Prometheus, Loki, Tempo, and Grafana across internal environments to centralize Kubernetes logs, metrics, traces, and scaling visibility for developer troubleshooting. • Migrated repositories from Azure DevOps to GitHub and removed more than 200 stale branches with CSV-driven automation; integrated developer-authored Locust tests into CI/CD and built an initial k6 proof of concept.	

Ernst & Young LLP (continued)

Oct 2024 – Present

Internal Cybersecurity Product — Infrastructure & DevSecOps Delivery

Owned infrastructure and DevOps implementation within the product team, carrying an early VM-hosted application through hosted evaluation and an internal enterprise production release.

- Replaced the VM-hosted deployment with containerized React and .NET services on Azure Kubernetes Service and created reusable Helm-based Kubernetes deployment patterns.
- Built Azure DevOps pipelines and integrated SonarQube, Mend, AquaSec, Checkmarx One, and Qualys WAS into delivery workflows.
- Led QA enablement and release readiness across functional and non-functional validation while consuming secrets and certificates from Azure Key Vault through the Secrets Store CSI Driver.

Technology Analyst Intern

May 2023 – Apr 2024

Morgan Stanley, Montreal, Quebec

Led an assigned test-infrastructure modernization workstream for a long-lived internal application-hosting platform within the wider platform team.

- Made established system-test execution more reproducible by tracing direct and transitive dependencies from a centralized shared filesystem and packaging them into Docker images.
- Built Python and shell helper files plus CLI tooling for repeatable image construction, test execution, and result inspection.

Application Development Analyst

Dec 2021 – Aug 2022

Application Development Associate

Nov 2020 – Nov 2021

Accenture Solutions Pvt Ltd, Bengaluru, India

Adapted cloud-security automation, CI/CD, and OpenShift application delivery across multi-cloud operations and an architect-led enterprise DevOps platform for a telecommunications client.

- Implemented AWS Lambda automation with Python and Boto3 for recurring security-remediation and compliance work, alongside security practices across AWS, Azure, and GCP environments.
- Engineered reusable Groovy Shared Library components for myWizard for DevXOps Jenkins workflows integrating GitLab, SonarQube, Nexus, and OpenShift.
- Built Groovy, Job DSL, and Python automation for repository and Jenkins-job onboarding and cross-environment OpenShift image-version comparison exposed through Jenkins.
- Delivered application components through bastion-host access in an internet-restricted client environment, adapting OpenShift workloads within customer-managed VMware-backed compute.

PROJECTS

Cross-Cloud MLOps Pipeline

Mar 2023 – Apr 2023

University of Ottawa — Academic Three-Person Course Project

- Led the team and implemented provider-specific continuous-training and deployment artifacts across AWS SageMaker, Azure Machine Learning, and GCP Vertex AI using Docker and provider-native mechanisms; tested hosted endpoints through a shared notebook.

Moving Services Application

Sep 2023 – Dec 2023

University of Ottawa — Six-Person Student Client Engagement

- Led the cloud and DevOps workstream, evaluated hosting options, mapped the React and Spring Boot solution to Azure services, and established GitHub Actions delivery for a working hosted foundation.

EDUCATION

Master of Engineering in Electrical and Computer Engineering

Sep 2022 – May 2024

University of Ottawa, Ottawa, Ontario

Bachelor of Engineering in Electronics and Communication Engineering

Aug 2016 – Aug 2020

JSS Academy of Technical Education, Karnataka, India (Visvesvaraya Technological University)
